Reasons for Allowance

3. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter.

In re Application of: Tuken et al.

3.1 The instant application is directed to a non-obvious improvement over the information described the prior art, the most relevant of the prior art of record being the article authored by Akin et al., entitled *Rule-Based Fuzzy Logic Controller for a PWR-Type Nuclear Power Plant*, which discloses a multiinput mathematical model formulated and validated against experimental results by Kerlin et al., for predicting the dynamic response of the H.B. Robinson nuclear power plant during full power operation.

3.2 The improvement comprises, in various embodiments, a system and method for estimating a set of model parameters based on the values of a number of system operating conditions, wherein the values are generated by at least one sensor operable to sense and produce sensory data of an operating condition of the system, whereby a control circuit uses the sensory data to maintain a mathematical model and periodically update a data matrix in response to the number of system operating conditions, wherein the control circuit estimates the set of model parameters based on the updated data matrix. These patentable distinctions are included in each of the independent claims, nos. 1, 26 and 46.

3.3 For at least these reasons, the art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <estimation of a set of model parameters based on the values of a number of system operating conditions> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 3, line 17 through page 13, line 30, and Figures 1-3. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
